About me

I am a senior student passionate about web development, with experience in mid-scale front-end and back-end projects. I am skilled in HTML, CSS, JavaScript, and have built multiple Node.js APIs, along with some experience in Python. I collaborate well, solve problems quickly, and focus on writing clean, efficient code. My goal is to become a strong Web Developer and continue learning and growing in a professional environment.

Education

Duy Tan University

10/2022 - NOW | Bachelor – Software Engineering – CMU Program

Skill

HTML	NodeJS	Mysql
CSS	Python	SQL Server
JavaScript	Git	

Work Experience

10/2025 - 12/2025

Green Map - Community Safety & Rescue Mapping Platform

- **Description:** Green Map is an interactive web mapping platform that allows users to share items, locate charity points, and participate in community activities through real-time posts and map markers.
- **Role:** Full-stack Developer
- **Front-end** HTML, CSS, JavaScript — designed an eco-friendly, intuitive, and responsive UI with soft green tones that align with the Green Map concept.
- **Back-end** Node.js & Express — developed secure, scalable APIs for user authentication, posting, item sharing, saved posts, notification handling, and map-based interactions. Ensures stable performance and smooth data flow between client and server.
- MySQL, Mapbox, Git
- **Description:** This is a mid-scale project with essential core features
- **Role:** Full-stack Developer
- **Technologies:** HTML, CSS, JavaScript, Node.js, MySQL)

Key Responsibilities & Achievements:

- Developed a hotel room booking system with features such as room listing, availability checking, booking, and customer management.
- Built RESTful APIs using Node.js to handle booking logic, authentication, and data processing.
- Designed responsive UI using HTML, CSS, and JavaScript to ensure smooth user experience.

- Implemented MySQL database (via XAMPP) for storing users, bookings, room details, and transaction records.
- Optimized system flow to improve booking accuracy and reduce processing time.

2/2025 - now

TravelTour - Web application for management and promotion of ecotourism

- **Description:** Developed a web-based platform for ecotourism tour booking and management, enabling customers to search and book tours online while supporting providers in managing tours, bookings, and tour guides.
- **Role:** Backend Developer
- **Team size:** 5
- **Tech stack:** Node.js, MySQL, RESTful API, JWT, Git

Key Responsibilities & Achievements:

- Designed and implemented Admin APIs for managing system data:
 - User management (Admin, Provider, Guide, Customer)
 - Tour approval & moderation
 - Booking monitoring & control
- Built role-based authentication & authorization using JWT
- Developed CRUD APIs for tour management and user management
- Designed and optimized MySQL database schema (Tours, Bookings, Users, Guides, Reviews)
- Implemented business logic for tour approval workflow
- Monitored and handled system activity logs
- Integrated email notification system for system events
- Ensured API performance (<300ms response time for ~500 concurrent users)
- Reduced manual tour approval process by automating Admin moderation system
- Improved system scalability by designing modular RESTful architecture
- Ensured secure access control with multi-role authorization
- Built backend structure following MVC & clean architecture principles

System Features You Contributed To:

- Tour Management System (CRUD + approval flow)
- Booking Management System
- Role-based Access Control (RBAC)
- Review & Feedback Moderation
- Admin Dashboard APIs
